crossTable

Creates a contingency table of 2 variables. Percentage are optional by row or column. It can provides an optional statistic (fisher or chisquare).

NB: rrcrossTable provides a better view of results if data are ordered factors.

Recoding some data to ordered factors

```
data(Tiramisu)
DF <- Tiramisu
DF %<>%
  orderFactors(c(1, 5, 7:9, 11, 13:21) , values = c(1,0), labels = c("YES", "NO")) %>%
  orderFactors(sex, values = c("males", "females"), labels = c("Males", "Females"))
```

crossTable ill - tira

```
ret <- crossTable(DF, var1="ill", var2="tira")
ret
```

```
##   tira / ill YES  NO Total
## 1      YES  94  27   121
## 2      NO   7 158   165
## 3      Total 101 185   286
```

```
kable(ret, align="r")
```

tira / ill	YES	NO	Total
YES	94	27	121
NO	7	158	165
Total	101	185	286

crossTable ill - sex with column percentage and chi2 stat

```
ret <- crossTable(DF, "ill", "sex", "col", "chi2")
ret
